

Note: The live-stream must have a standard resolution of 640x360 and quality must be 360p30 (frame rate = 30fps)

1. Start a twitch live stream on your twitch channel
2. Copy the channel name from the twitch url (here it is 'esl_csgo')

3. Using the node.js code, run the following commands in the same directory of the code from the command-line

Commands:

- i) ``npm install`` : Install all the node.js dependencies
- ii) ``node getChannelStreams.js`` : run the main code
- iii) enter the name of the twitch channel where you are doing the live stream in the prompt and press enter.

You will get the m3u8 link to the live stream (check screenshot)

```
+ node-twitch-get-stream-master npm install
